What is the SMART 21 Project?
The Silver State Modernization Approach for Resources and Technology in the 21st Century project commonly referred to as SMART 21 was instituted to replace the State’s 19-year-old legacy Enterprise Resources Planning (ERP) system. Established under Assembly Bill 504 of the 79th Legislative Session, the State of Nevada’s Office of Project Management (OPM) was designated as the implementation activity for the SMART 21 ERP project.

SMART Objectives:
SMART 21 has two primary objectives:

1. Implement an integrated, flexible ERP system that supports standardization of data and business processes, and meets the State of Nevada’s current and future needs; and
2. Realize an “Efficient and Responsive State Government” that delivers excellent customer service, streamlined processes, and top-performing employees.

SMART 21 Sponsorship and Support
The SMART 21 Executive Committee provides sponsorship, executive level guidance on matters of project execution, strategy and outreach to departments and agencies. The SMART 21 Steering Committee, represented by key business stakeholders, ensures the project serves the business needs of the state while minimizing technical and operational risks.

SMART 21 Today
The SMART 21 OPM conducted extensive workshops across all state agencies engaging over 450 subject matter experts and stakeholders to define the requirements for the future ERP. After a comprehensive solicitation and evaluation process, the SMART 21 ERP contract was awarded to LSI Consulting. LSI Consulting has been specializing in public sector ERP solutions since 1998 and will provide robust ERP cloud services to the State of Nevada powered by SAP.

SMART 21 Needs You!
Throughout the SMART 21 ERP project lifecycle the OPM will continuously need subject matter experts, champions and early adopters to participate on the project. To learn how you can be part of the SMART 21 ERP contact us. We look forward to hearing from you.
